Example: models 1 – 4

KaCool D AF - Comfortable feeling of well-being, thanks to AtmosFeel

KaCool D AF – AtmosFeel for the highest standards of comfortable air supply and design. The ceiling cassettes provide a wide spectrum of cooling and heating outputs in different output ranges.

The design panel has been developed specifically for maximum comfort and the ultimate in design standards. Cold air passes through four side air outlets along the ceiling and into the room and is perfectly dissipated. The so-called Coanda effect is used for this, which produces a comfortable room climate without draughts. The outlet slats can be manually adjusted. The minimal installation height of the ceiling cassettes and the flat design panel are both ideal for all rooms with a suspended ceiling. The units can be operated using a room thermostat, infra-red remote control or, ultra-conveniently, using the KaController.

Fresh air

The supply of primary air enters through a pre-punched opening on the housing, to which a circular hose can be connected. An additional fan is then needed on site for this configuration.

Supply to adjacent rooms

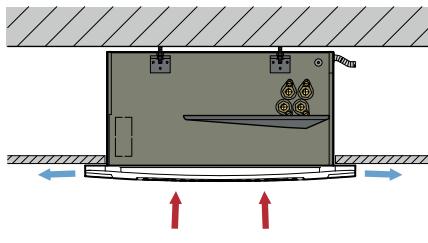

Depending on the size of the unit, one or two connecting spigots can be connected to the punched opening(s) to provide an air supply discharged into an adjacent room. The air volume can be regulated by closing one or both discharge openings.

Valves

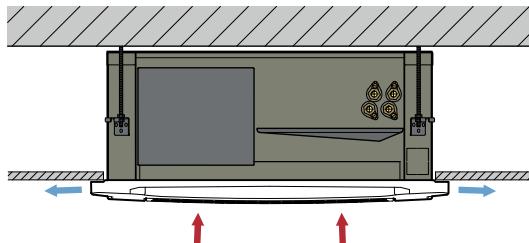

3-way or 2-way valves can optionally be provided separately for installation on site. They include an actuator and the required pipework to connect the valve to the cassette. There is an option of factory integrating the valves into the cassette with larger order quantities. They are completely pre-assembled and wired inside the cassette.

Cooling example

Models 1 – 4

Model 5 – 7

Product data

Product advantages

- ▶ draught-free air supply into rooms through side air outlets
- ▶ minimalist cassette design
- ▶ whisper-quiet EC technology
- ▶ easy to install
- ▶ fully automatic KaControl or connection to an existing, external building automation system

Example: models 1 – 4

Features

- ▶ 7 overall sizes
- ▶ ABS panel with AF (AtmosFeel) in traffic white, similar to RAL 9016
- ▶ optionally with "metal grid casing panel" colour coordinated to meet customer requirements and fitting precisely into 625 x 625 standard European ceiling grids (models 1 – 4)
- ▶ 0-100% infinitely adjustable EC fans
- ▶ optional primary air connection
- ▶ 2- or 3-way valves available as accessories, optionally factory-installed in the cassette with larger order volumes

- | | |
|---------------------------------|-------------------|
| Heating | ▶ LPHW |
| Cooling | ▶ CHW |
| Installation | ▶ ceiling-mounted |
| Heat exchanger | ▶ 2-pipe |
| | ▶ 4-pipe |
| KaControl | ▶ optional |
| Infra-red remote control | ▶ optional |

- Condensation pump**
- ▶ 600 mm head from stylish casing

- Condensation connection:**
- ▶ outside diameter 13.5 mm

Performance data

Cooling output¹⁾ [kW]

- ▶ 1.84–12.0

Heat output²⁾ [kW]

- ▶ 4.04–25.9

Operating limits

- ▶ max. operating pressure: 8 bar
- ▶ min. entering water temperature: 5 °C
- ▶ max. entering water temperature: 75 °C
- ▶ min. entering air temperature: 5 °C
- ▶ max. entering air temperature: 35 °C
- ▶ relative humidity: 15–75%

Applications

Buildings of all kinds, which require whisper-quiet cooling and/or heating from a visually subtle design.

Hotels / motels

Sales rooms and showrooms

Office and meeting rooms

Restaurants and cafés

¹⁾ at CHW 7/12 °C and $t_{L1} = 27^\circ\text{C}$ and 48% relative humidity

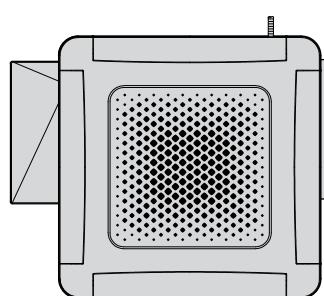

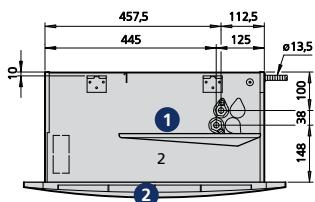

²⁾ at LPHW 70/60 °C, $t_{L1} = 20^\circ\text{C}$.

bottom view

- ① Condensation drip tray for valve assembly
- ② Design panel in traffic white, similar to RAL 9016

¹⁾ at CHW 7/12 °C, t_{L1} = 27 °C, 48 % relative humidity.

²⁾ at LPHW 70/60 °C, t_{L1} = 20 °C.

KaCool D AF at a glance

Features

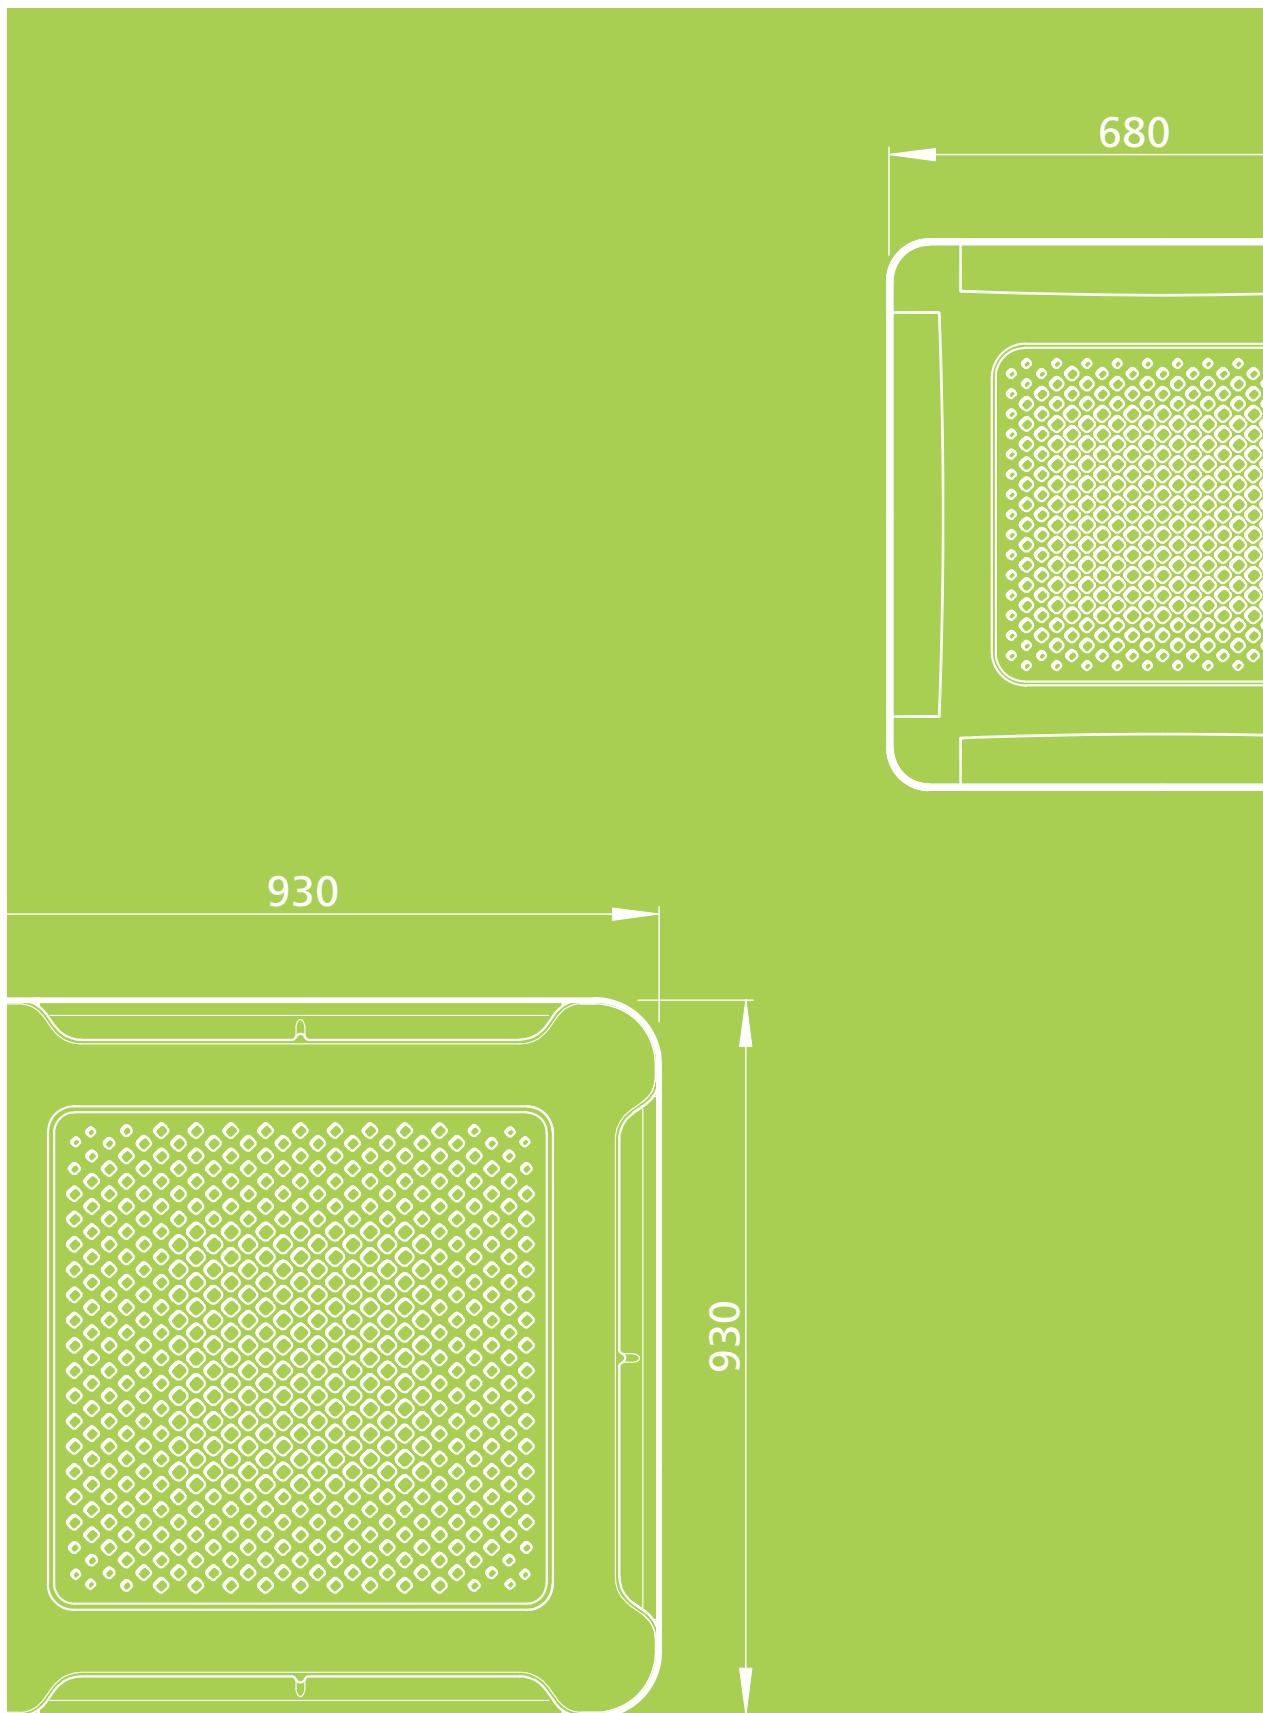

Example: models 1 – 4

- 1 Compact basic housing:**
 - ▶ made of galvanised sheet steel
 - ▶ the outside has a fleece coating for improved insulation from the environment
 - ▶ the inside has high-grade 10 mm vapour diffusion-tight polyethylene foam matting
- 2 Punched opening for external air outlet:**
 - ▶ connection option for air outlets (see p 25)
- 3 Punched opening for optional fresh air connection:**
 - ▶ models 4 – 7 per spigot (max. 2 80 m³/h)
 - ▶ models 5 - 7, max. 120 m³/h
- 4 AtmosFeel air outlet:**
 - ▶ four manually adjustable outlet air slats
 - ▶ smooth plastic
 - ▶ easy to clean
- 5 Electrical junction box for control PCBs:**
 - ▶ KaControl
 - ▶ infra-red electronic receiver
 - ▶ terminals only, for on-site control
- 6 Design panel in traffic white, similar to RAL 9016:**
 - ▶ outlet optimised for maximum comfort through side air outlets and utilisation of the Coanda effect
 - ▶ IR receiver concealed within the design panel
- 7 Condensation connection:**
 - ▶ outside diameter 13.5 mm
- 8 Air filter Coarse:**
 - ▶ simple to remove
 - ▶ easy to clean
- 9 Air inlet grille:**
 - ▶ large free cross-section to minimise pressure losses
- 10 Hydraulic connections:**
 - ▶ for CHW, LPHW and condensation drain
 - ▶ valve drip tray drains any condensation produced into the condensation tray
 - ▶ drip tray is supplied with the unit
 - ▶ available with built-in valves with corresponding order volumes (fig. 14)
- 11 Condensation pump and float switch:**
 - ▶ easily accessible by removal of the polystyrene condensation tray
 - ▶ integrated condensation pump drains the condensation up to a max. head of 600 mm
 - ▶ pump activation by a two-stage float switch
 - ▶ the pump is switched on when the first stage is reached, the second stage activates an evaluable alarm contact
- 12 Fans:**
 - ▶ continuously variable EC fans
 - ▶ efficient and low-noise
 - ▶ protection class IP 44, insulation class B
 - ▶ integrated thermal contact to prevent the motor from overheating
- 13 Heat exchanger:**
 - ▶ made of copper pipe with aluminium fins
 - ▶ 2-/4-pipe version
 - ▶ vent and drain valves on the outside of the unit
- 14 Valves (optional):**
 - ▶ optionally factory-integrated

02 ▶ Technical data

Advice on measuring conditions

The cooling and heat outputs have been calculated in line with DIN EN 1397: 2015-11 „Water-air fan convectors, test methods for establishing the performance“.

The specific requirements for cooling and heating mode are taken into account in DIN EN 1397. Eurovent measurements are also based on them, permitting certification following measurements in accredited test laboratories.

Normative reference

The standard refers to:

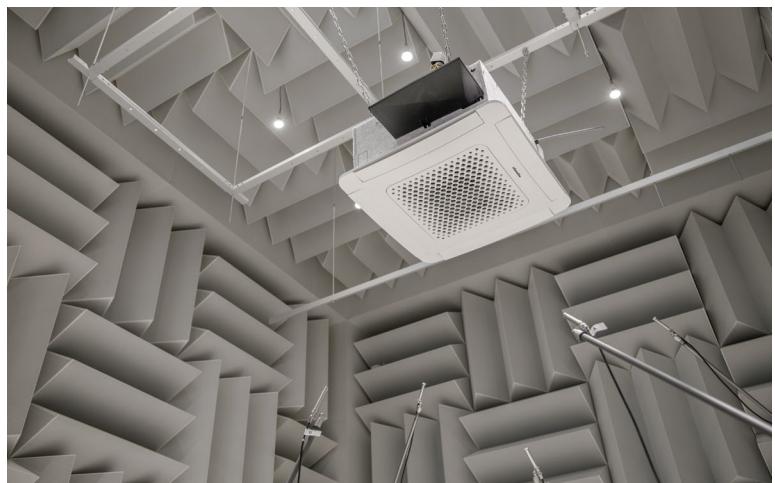

- ▶ EN 23741; Determining the sound power levels of noise sources
- ▶ EN 45001; General criteria for the operation of test laboratories
- ▶ ISO 5801; Industrial fans; performance testing using standardised airways
- ▶ ISO 5221; Air distribution and air diffusion; rules to methods of measuring air flow rate in an air handling duct

The entering air temperature of the ceiling cassette is selected as the reference/air temperature, which should not be confused with the ambient temperature.

In practice, most ceiling cassettes are mainly positioned underneath the slab ceiling and within a suspended ceiling. Due to the temperature stratification that occurs, the entering air temperature differs from the air temperature in the room (measured at a height of 1.5 m).

In cooling mode, the room temperature is significantly lower than the entering air temperature, depending on the distance from the air inlet. Therefore, if an entering air temperature of 27 °C is assumed when calculating the output, the room temperature will be much lower.

To avoid the build-up of heat in heating mode, the position of the outlet louvres can be varied. The warm air can therefore be targeted specifically to where it is needed.

03 ▶ Design information

Information on planning and design

The unit size of chilled water air conditioning systems depends on the cooling outputs calculated as well as on the structural conditions.

The cooling load required is calculated in line with VDI 2078 (VDI regulations governing cooling loads).

The usual cold water temperature spread is approximately 5K. Take into account the effective unit outputs in line with the technical conditions of installation and use. Check the suitability of all components (circulation pump etc.) for use with cold water, noting the minimum temperatures.

Choice of installation site

Take into account the following requirements when choosing your installation location:

- ▶ no obstacles to air distribution and air intake
- ▶ sealed ceiling system to ensure air routing parallel to the ceiling
- ▶ minimum gap of 1.5 m between the unit and the nearest wall and a maximum installation height of the unit of 3.5 m above floor level
- ▶ pre-adjustment of louvres for optimum air discharge
- ▶ ease of access to pipes and electrical connections
- ▶ positioning of the cooling unit to fit in with the architecture and environment (e.g. ceiling lights)

Avoid:

- ▶ location with direct sunlight
- ▶ installation close to heat sources
- ▶ impaired air circulation due to lamps, furniture or shelves

Ceiling-mounted

KaCool D AF ceiling cassettes are manufactured to European standard ceiling grid dimensions. Models 5 – 7 can be installed centrally within four grids. The ceiling panels are then simply trimmed to fill in the gaps.

Caution!

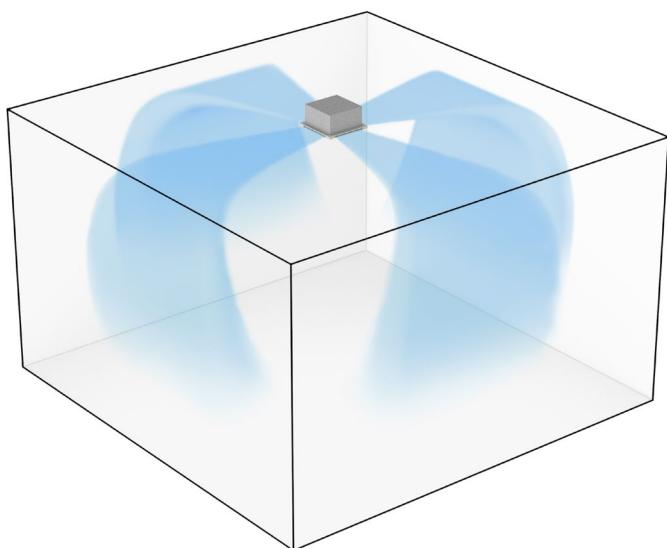

Provide access panels for maintenance work on the unit with closed ceiling systems. Ensure that the unit is precisely horizontal to prevent the condensation tray from overflowing. Ensure that the depth of the suspended ceiling is sufficient to accommodate the unit.

AF - AtmosFeel

Coanda effect

The air outlet is located at the side to guarantee maximum comfort (AtmosFeel). This cool air flows along the ceiling, is dispersed and falls to the floor (see figures). This avoids draughts as much as possible.

In heating mode, the position of the slats can be altered, if required, with the ABS design panel, which means that the air stream can be specifically directed downwards.

Casing panels

ABS design panel

The ABS design panel is supplied as standard with KaCool D AF units, combining design, maximum comfort (AtmosFeel) and unbeatable value for money.

It is available in two different sizes:

- 1) Model 1 – 4: 680x680 mm
- 2) Model 5 – 7: 930x930 mm

1) Model 1 – 4: 680x680 mm

Metal grid casing panel

A painted galvanised steel casing panel can also be used as an alternative to the ABS design casing panel, available for 625x625 mm ceiling grids (models 1 - 4) and 900 x 900 mm (models 5 – 7). It is supplied as standard in traffic white, similar to RAL 9016, but in larger order volumes can also be adapted to customer requirements.

It is available in two different sizes:

- 1) Model 1 – 4: 625x625 mm
- 2) Model 5 – 7: 900x900 mm

1) Model 1 – 4: 625x625 mm

2) Model 5 – 7: 930x930 mm

2) Model 5 – 7: 900x900 mm

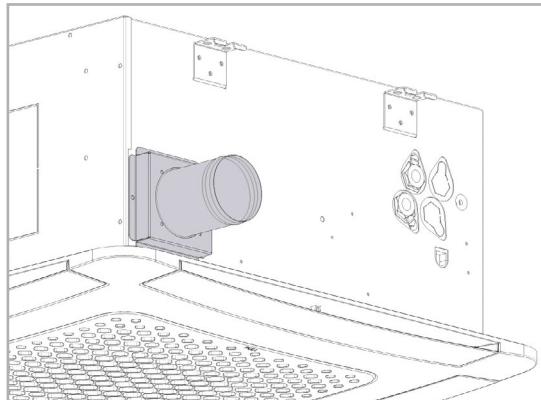

Air connections

Primary air spigots for the fresh air supply

KaCool D AF units can be supplied with primary air, which is then supplied to the room through the units. The pre-conditioned air needs to be cleaned and have a minimum temperature of 14°C and a maximum temperature of 25°C.

A primary air spigot, available as an accessory, is needed for the connection. It is fixed to the side of the cassette. The connection diameter is 80 mm. Models 1 – 4: max. two primary air connections, each 80 m³/h

Models 5 – 7: one primary air connection, max. 120 m³/h

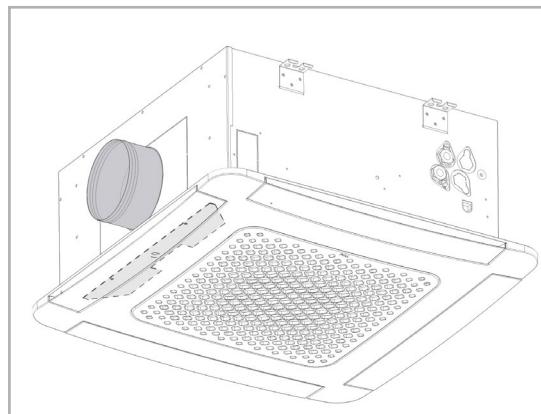

Fresh air connection, models 1 – 4

External air outlet

An air line can be connected to the ceiling cassette to provide adjacent rooms (e.g. changing rooms) with conditioned air. A pre-punched opening with a diameter of 150 mm needs to be removed on the side of the cassette to which an on-site flange must be fitted. An insulated air line and outlets can be connected to it. Seal the respective air outlets with adhesive tape.

Make sure that you keep the pressure loss at the outlet and air line as low as possible (max. 15 Pa total pressure loss). As a result, up to 15% of the total air volume of the ceiling cassette can be moved.

Models 1 – 4

Valve kits

The accessories range includes 2-way and 3-way valves. The valve kit contains an Open / Close actuator and connecting pipes as standard. Other valves (e.g. continuous) are available on request. The valves are supplied as separate accessories and need to be fitted on site. Any condensation produced is collected in a valve drip tray, provided with every unit and drained to the condensation pump of the ceiling cassette.

Actuators

Voltage supply	Current consumption [A]	Power consumption [W]
230V	0.25	1.8
24V	0.35	1.8

Valve lift 2.5 mm

M 30 x 1.5 threaded connection

Actuator mode: On / Off, NC (normally closed)

Valves

Model	Connection		KVS value	
	KaCool D AF	2-pipe	4-pipe	2-pipe
1	1/2 "	2x1/2 "	1.7	1.7
2	3/4 "	2x1/2 "	2.8	1.7
3	3/4 "	2x1/2 "	2.8	1.7
4	3/4 "	2x1/2 "	2.8	1.7
5	3/4 "	2x3/4 "	2.8	2.8
6	3/4 "	2x3/4 "	4.0	2.8
7	3/4 "	2x3/4 "	4.0	2.8

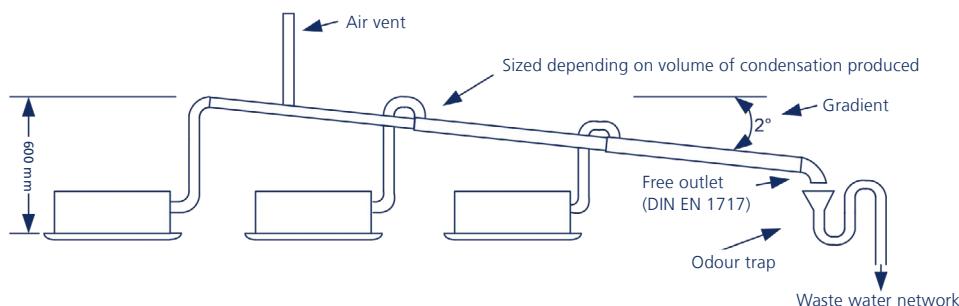

Built-in pre-fitted valves

There is an option to factory integrate the valves into the ceiling cassette with larger order volumes. The valves can then either be accessed from below after removing the condensation tray or from the side. The side cover of the housing can be removed for this purpose.

Condensation drain

Condensation will be produced if the ceiling cassettes are operated at a temperature below the dew point. The condensation from the heat exchanger drips into the condensation tray underneath. From here, it is pumped out of the unit by a condensation pump. The condensation produced from the condensation pump hose has to be drained from the unit down a 2% gradient. The condensation has to be collected in a pool pump on site if it has to be drained higher than the integrated pump allows. Accumulating condensate quantities can be taken from the calculation program.

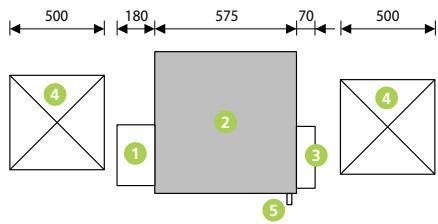

Schematic diagram

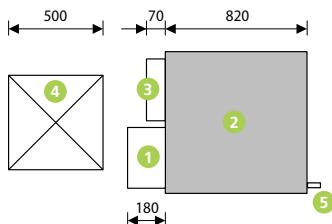

Service opening connection

Appropriate service openings are needed to service and maintain units installed in permanently sealed ceilings.

Models 1–4

Models 5–7

- ① Condensation tray for valves
- ② Ceiling cassette
- ③ Electrical junction box
- ④ Service openings (suggested 500x500)
- ⑤ Condensation connection (depending on the design of the transition between the condensation connection and the on-site condensation line, it may be necessary to provide for an additional service opening)

04 ▶ Controls

Control overview of KaCool D AF with EC Fans

KaCool D AF units with EC fans can be selected with various control configurations. All models of the cassettes have a built-in PCB.

A float switch monitors the condensation level in the condensation tray and switches on the condensation pump as required. If the condensation level continues to rise, despite the pump running, the cooling valve is closed and an alarm is emitted which can be evaluated on site.

The Kampmann KaControl is the most convenient and comprehensive control.

A high-performance parameterised microprocessor is designed to carry out all necessary functions. Each KaCool D AF unit therefore has its own "intelligence" and can be operated in groups via Kampmann-T-LAN or CAN bus networks.

Connection to building automation systems

KaCool D AF with KaControl can be equipped with plug-in communication interfaces for controlled operation in individual rooms or for linking into higher-order control systems: BACnet, CAN bus, LON, KNX and Modbus.

Infra-red remote control

The infra-red remote control is available for retrofitting into existing buildings.

Room thermostat type 30155

Room thermostat for manual 3-stage or continuously variable speed control in automatic mode for surface-mounted wall installation in an attractive retrained design.

Product features

- ▶ convenient operation of all cassette functions:
 - ▶ temperature
 - ▶ fan speed
 - ▶ mode

Product features

- ▶ colour: pure white (similar to RAL 9010)
- ▶ user-friendly
- ▶ functional and robust design
- ▶ 2- and 4-pipe applications
- ▶ Day/ECO/Off operating mode with room frost protection function
- ▶ built-in room sensor, connection option for external room sensor
- ▶ digital input for switchover between ECO and OFF
- ▶ digital output for heating/cooling changeover with 2-pipe systems
- ▶ only in conjunction with 230 V actuator

KaController operating unit

The „face“ of the KaControl building automation system is the KaController unit.

Product features

- ▶ room operating units for wall mounting with a high-quality design
- ▶ available with or without function buttons on the side
- ▶ plastic housing, colour similar to RAL 9010
- ▶ communication interface to the Kampmann T-LAN bus system
- ▶ push-turn navigator dial with endless turn/lock function
- ▶ built-in weekly switching program
- ▶ password-protected parameter level

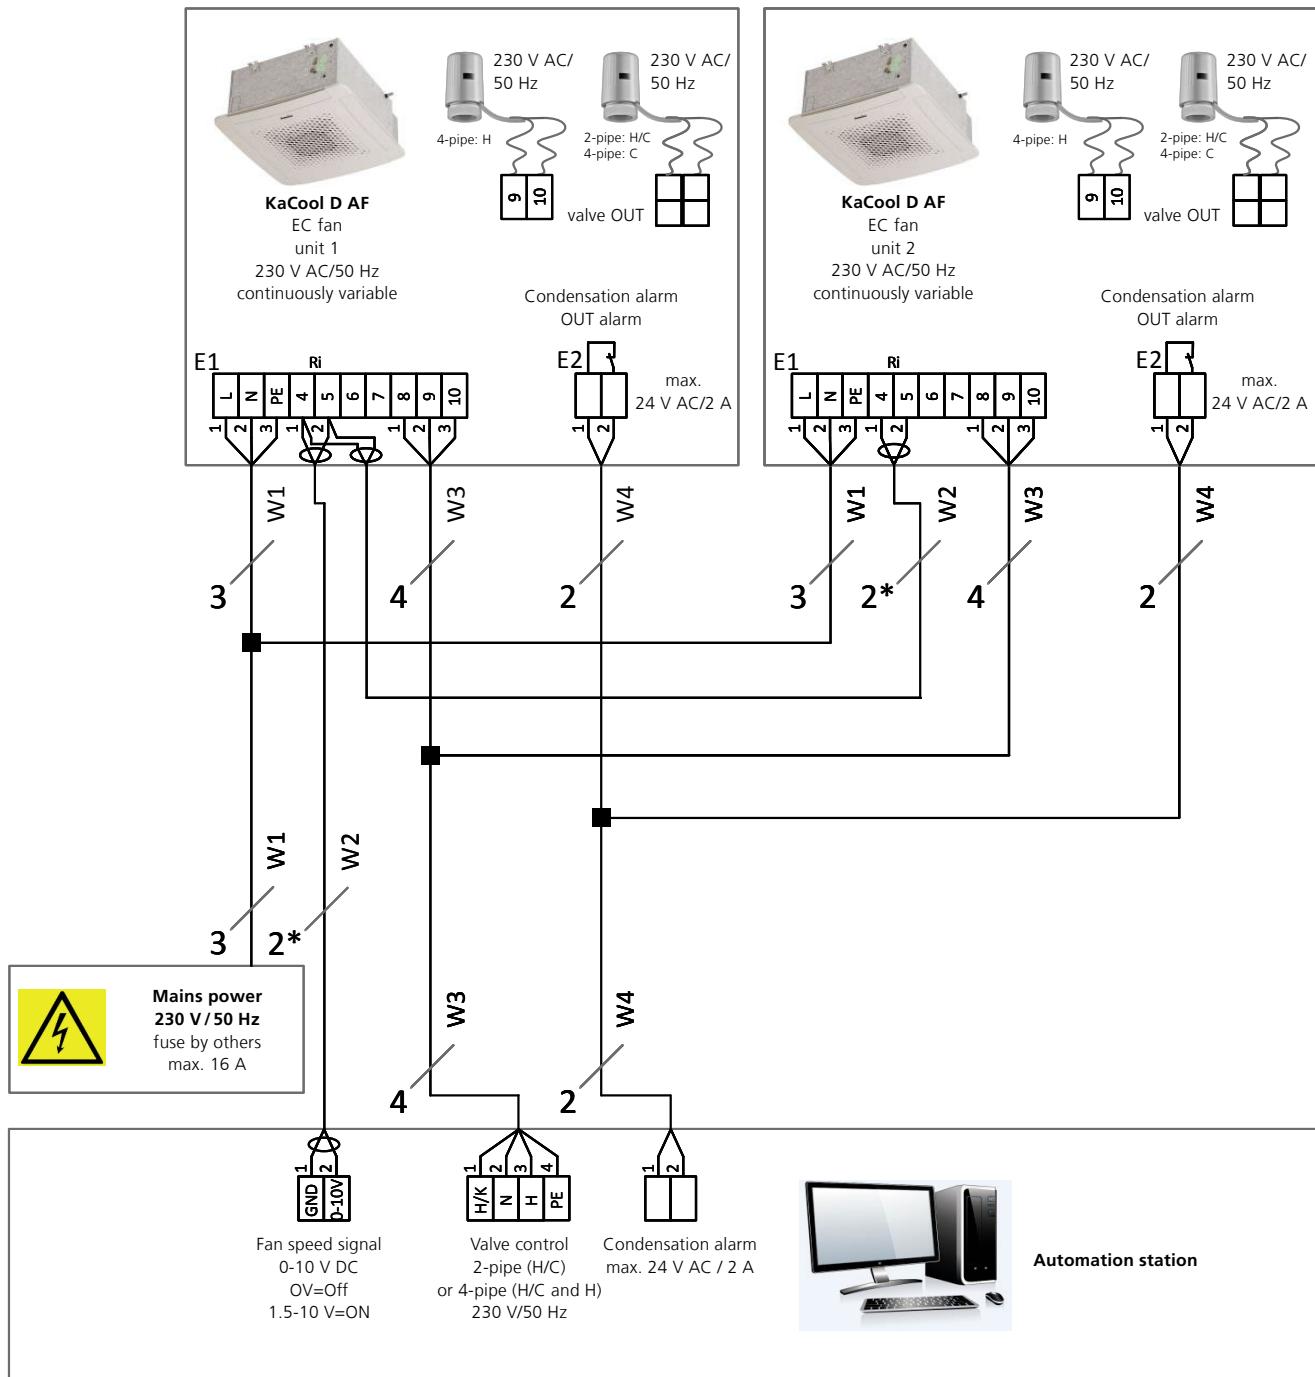

KaControl SEL control panel

For the central control and monitoring of up to 24 temperature zones, units groups or rooms.

Product features

- ▶ 3 timer programs; for 24 zones
- ▶ summer compensation
- ▶ room temperature setpoints / actual values
- ▶ central heating/cooling switchover in 2-pipe systems by external switching contact
- ▶ centralised temperature target value specification by an external signal 0 – 10V
- ▶ demand for heating via digital output
- ▶ demand for cooling via digital output
- ▶ collective fault alert in Kampmann system via digital output
- ▶ fault detection in chiller or heat pump
- ▶ heating/cooling changeover
- ▶ heat generator activation
- ▶ chiller or heating/cooling heat pump activation
- ▶ fault monitoring in single units (only if all units have Modbus cards, max. 24)
- ▶ switchover of individual control zones:
 - ▶ ON / OFF or ECO / DAY
 - ▶ ON / OFF or ECO / DAY entire system via external contact
- ▶ optional BACnet gateway

Electrical cabling – BMS control

*) Lay shielded cables e.g. B. J-Y(St)Y, 0.8 mm separately from power cables.

W1: Voltage supply

W2: Fan speed signal 0-10 V DC, Ri = 100 kOhm, max. line length 10 m from the BMS system to the 2nd unit

W3: Valve control

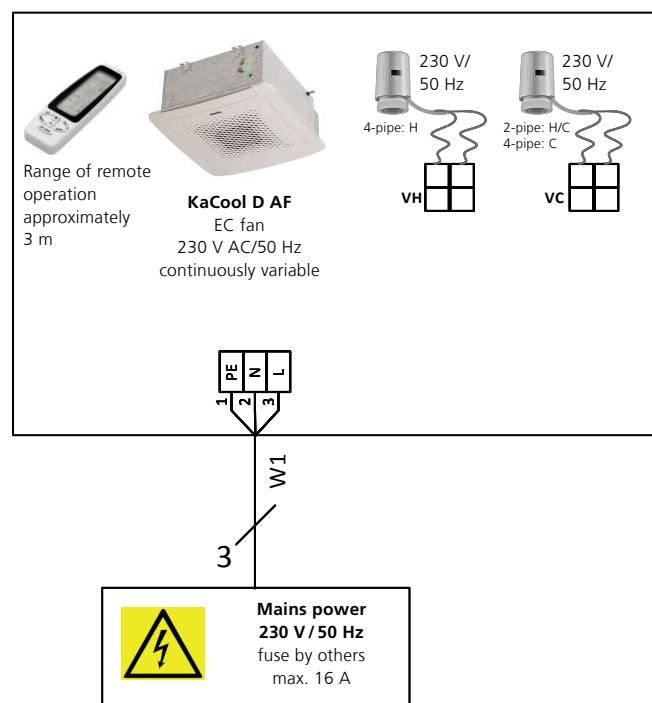

W4: Condensation alarm message

The number of connecting wires required including fuses is given on the individual control units.

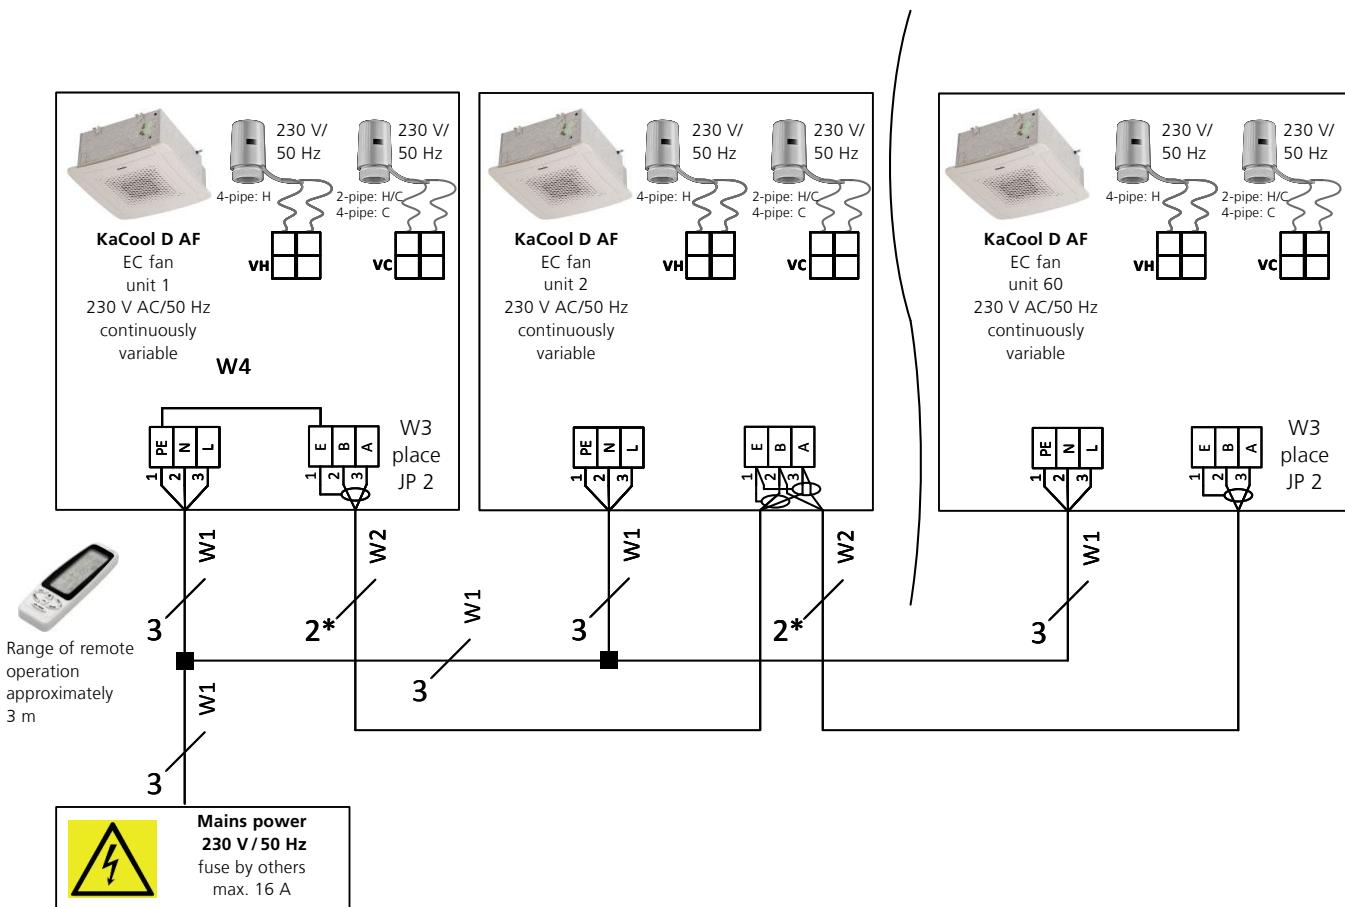

Electrical supply: observe the technical connection requirements laid down by the utility companies!

Cabling – Infra-red remote control

Single unit, infra-red remote control

W1: Voltage supply
The number of connecting wires required including fuses is given on the individual control units.
Electrical supply: observe the technical connection requirements laid down by the utility companies!

Group formation, infra-red remote control

*) Lay shielded data cable, twisted pairs, e.g. UNITRONIC® BUS LD 1 x 2 x 0.22 mm² or similar, linear but separate from power lines.

W1: Voltage supply

W2: Bus signal RS485, max. cable length 700 m

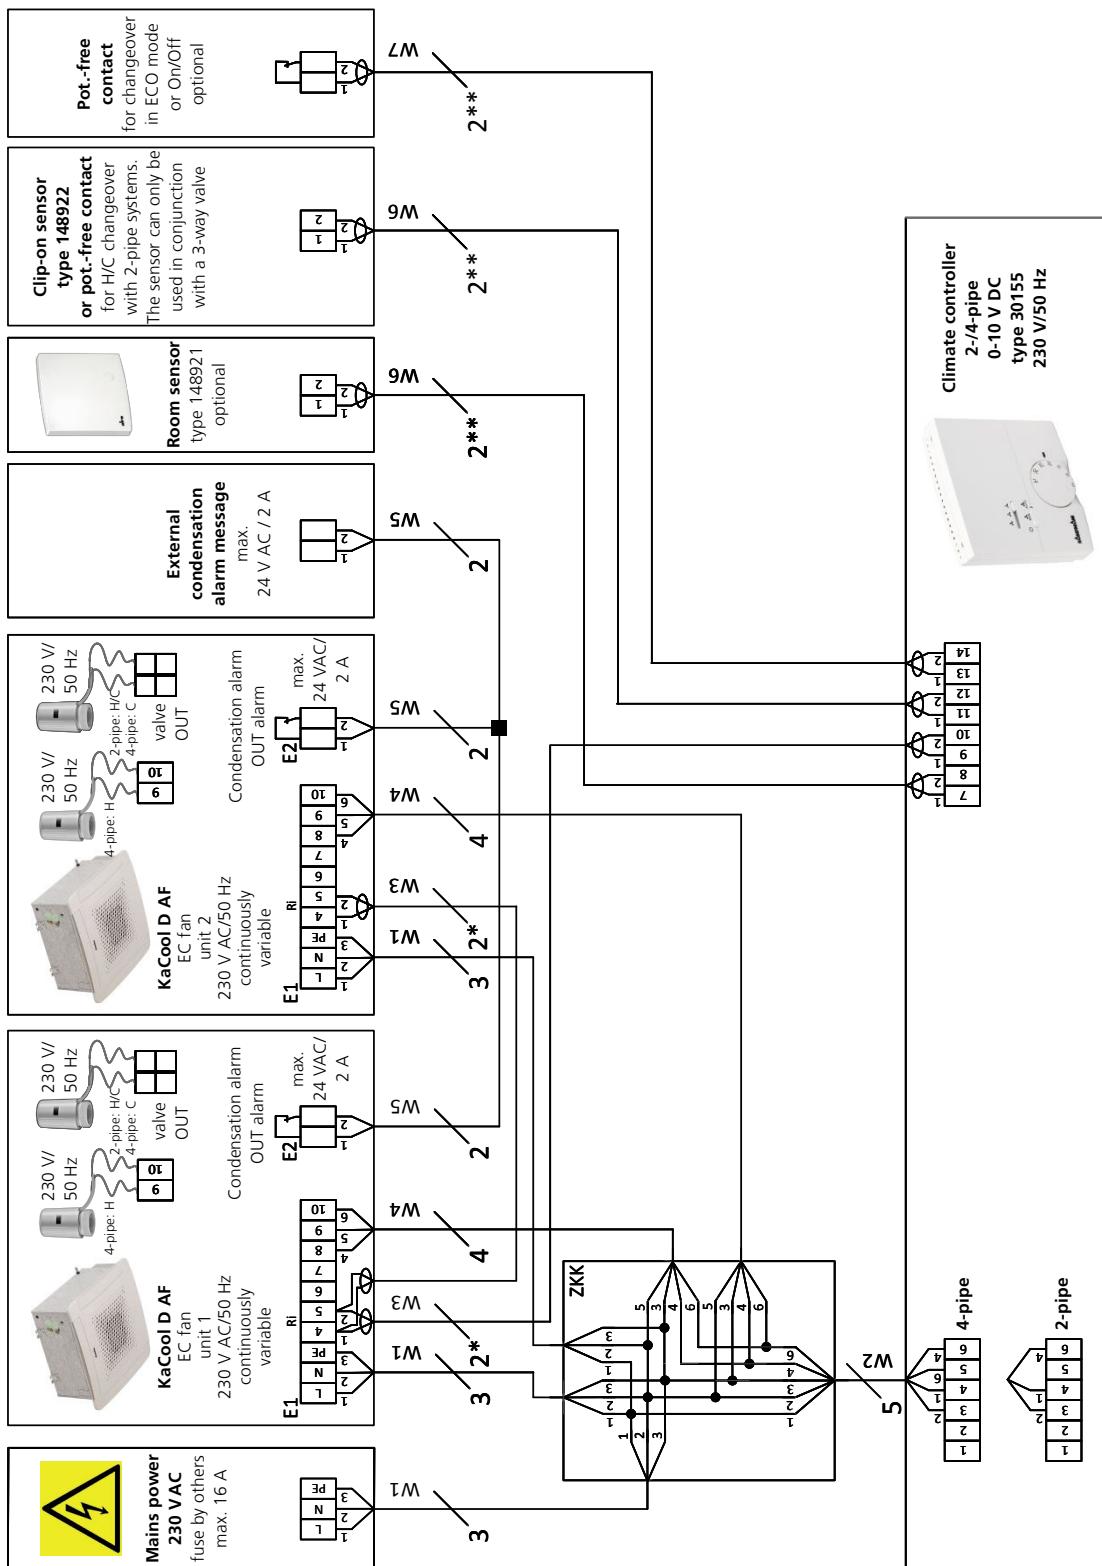

W3: Place JP 2 "End of the line" for 120 Ohm terminal resistance at the first and last unit

W4: Insert on-site wire jumper

The number of connecting wires required including fuses is given on the individual control units.

Electrical supply: observe the technical connection requirements laid down by the utility companies!

Electrical cabling – Control by climate controller type 30155

*) Lay shielded cables e.g. B. J-Y(St)Y, 0.8 mm separately from power cables!

**) Lay sensor connection cable 0.5 mm² e.g. J-Y(ST)Y, 2 x 2 x 0.8 mm, max. 50 m, separately from power cables!

W1: Voltage supply

W2: Voltage supply, valve control; only 4 wires with 2-pipe systems – wire 6 is omitted

W3: Fan speed signal 0-10 V DC, $R_i = 100 \text{ k}\Omega$, max. line length 10 m from the climate controller to the 2nd unit

W4: Valve control; only 3 wires with 2-pipe systems – wire 6 is omitted

W5: Condensation alarm message to external control

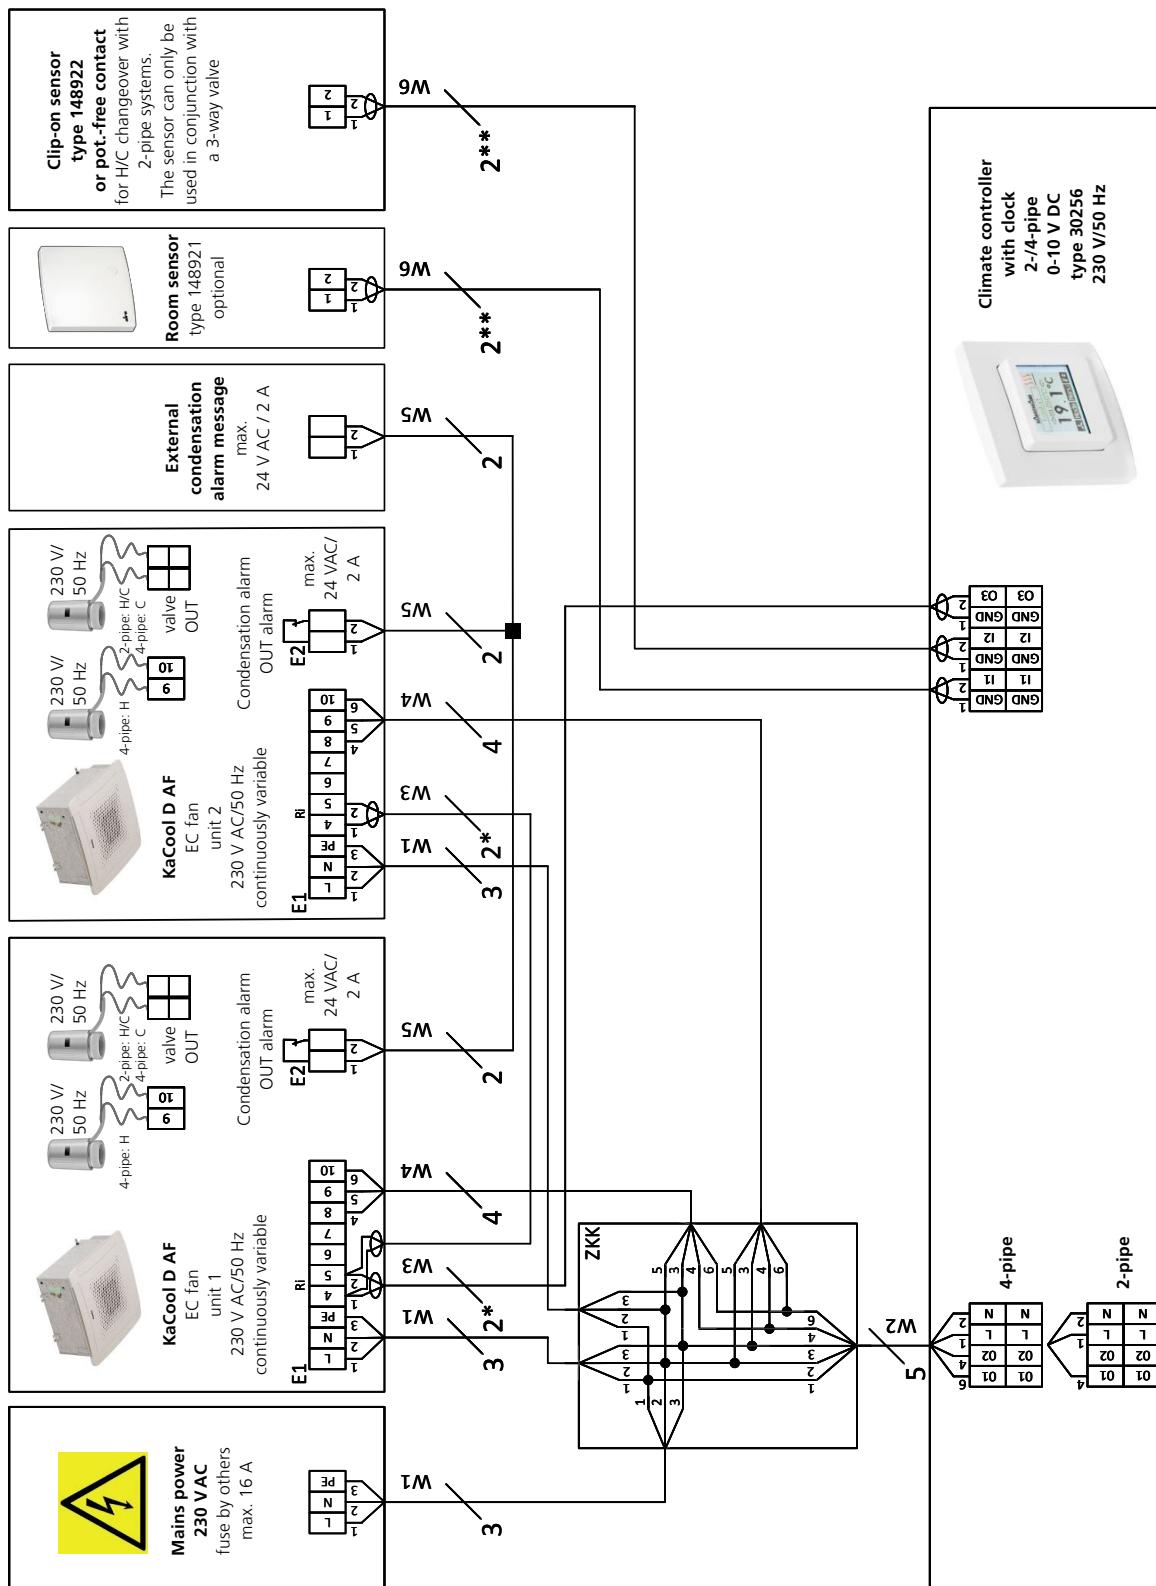

W6: Low voltage signal

W7: Low voltage signal; a wire jumper needs to be inserted if the input is not used

The number of connecting wires required including fuses is given on the individual control units.

Electrical supply: observe the technical connection requirements laid down by the utility companies!

Electrical cabling – Control by climate controller with clock type 30256

*) Lay shielded cables e.g. B. J-Y(St)Y, 0.8 mm separately from power cables!

**) Lay sensor connection cable 0.5 mm² e.g. J-Y(ST)Y, 2 x 2 x 0.8 mm, max. 50 m, separately from high-voltage cables!

W1: Voltage supply

W2: Voltage supply, valve control; only 4 wires with 2-pipe systems – wire 6 is omitted

W3: Fan speed signal 0-10 V DC, $R_i = 100 \text{ k}\Omega$, max. line length 10 m from the climate controller to the 2nd unit

W4: Valve control; only 3 wires with 2-pipe systems – wire 6 is omitted

W5: Condensation alarm message

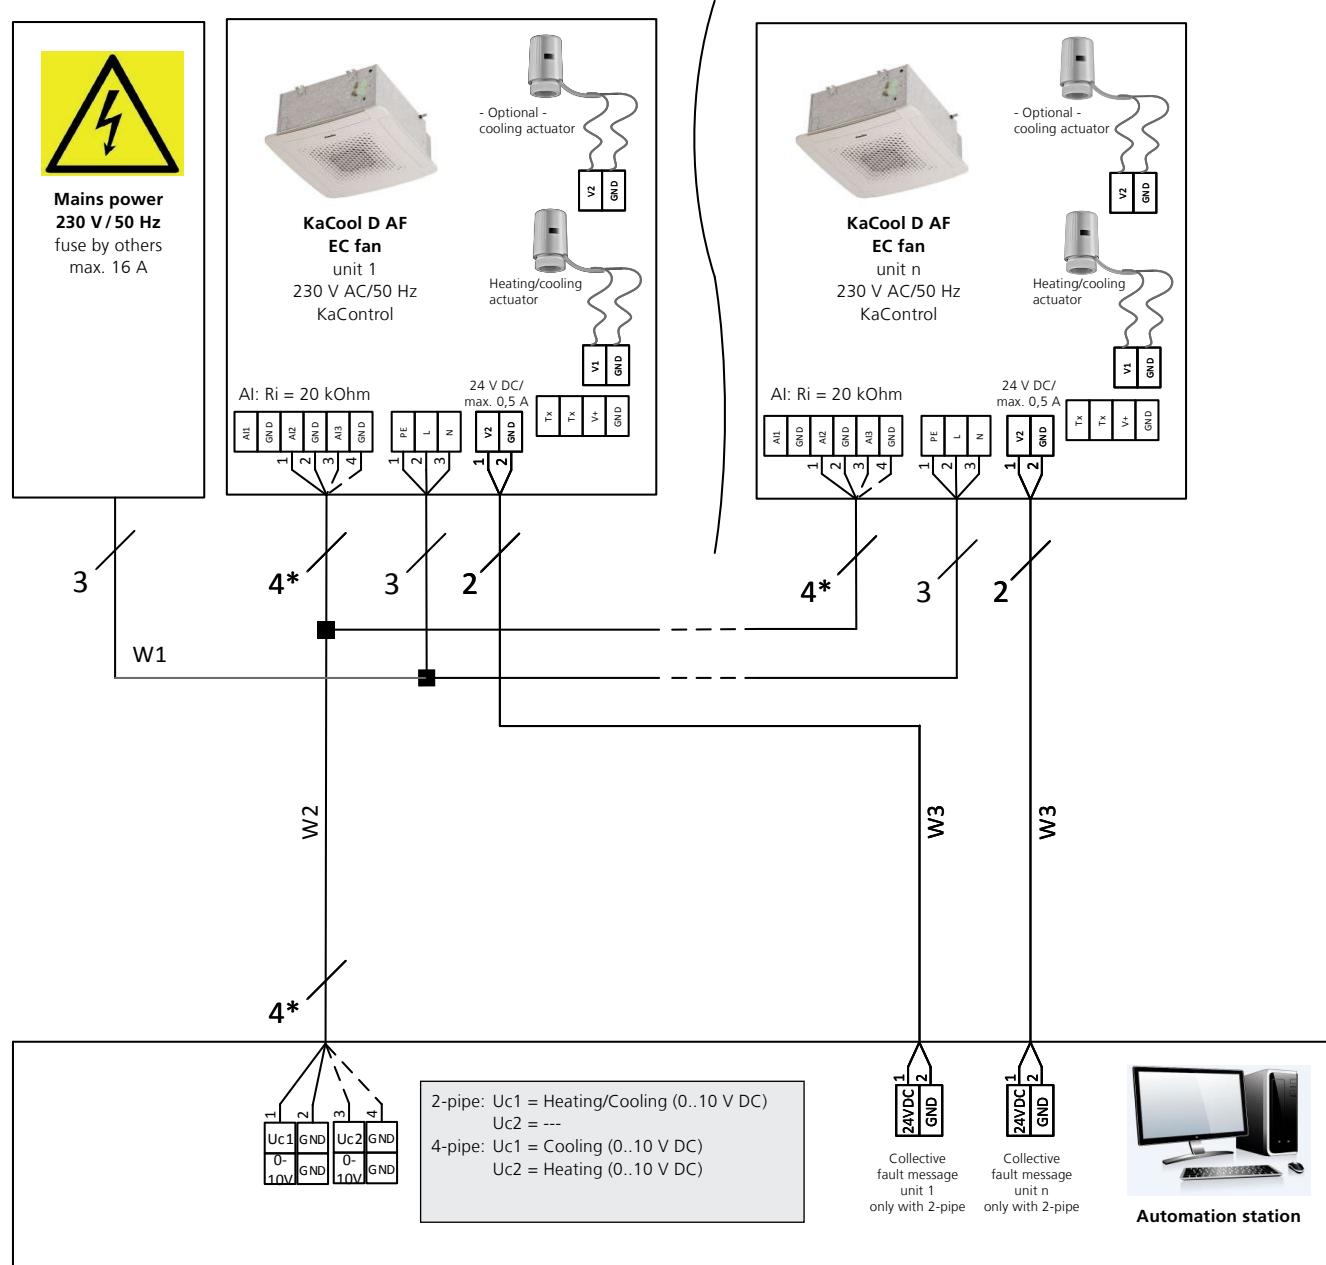

W6: Low voltage signal; if the input is to remain inoperational, the ECO function needs to be selected and the input unwired.

The number of connecting wires required including fuses is given on the individual control units.

Electrical supply: observe the technical connection requirements laid down by the utility companies!

Cabling – KaControl

BMS, KaControl

*) Low voltage line, lay separately from power cables!

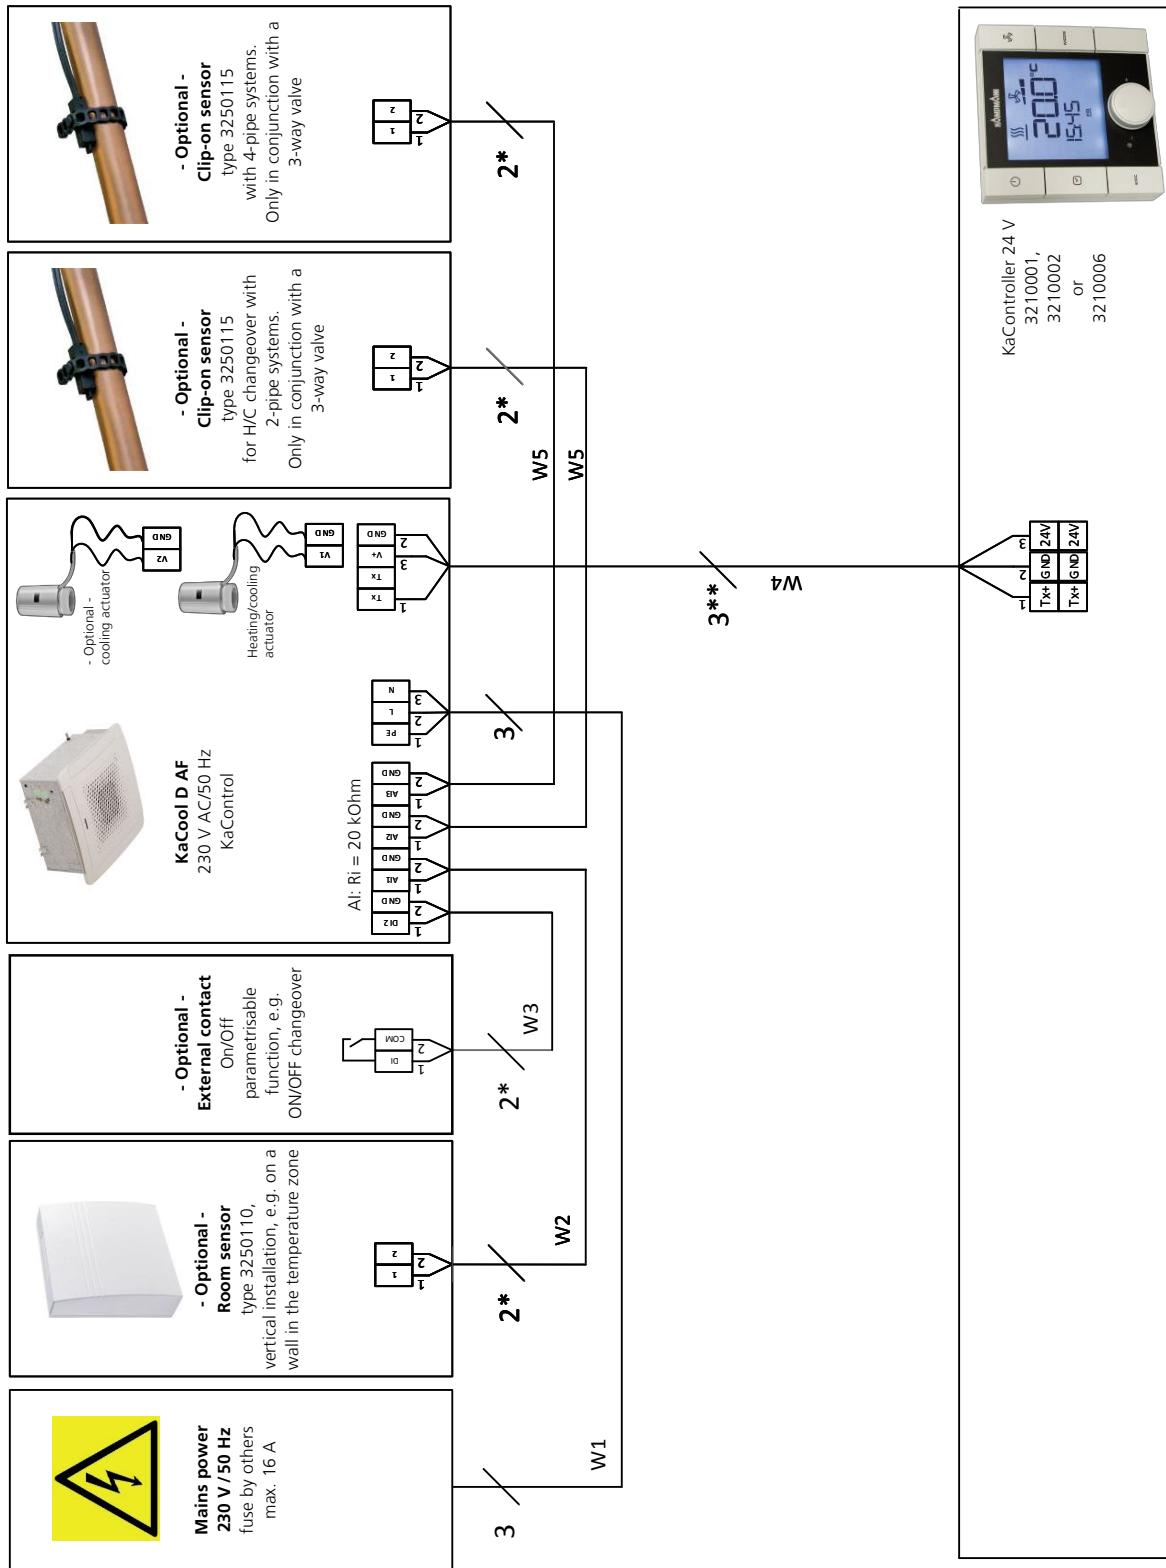

W1: Voltage supply

W2: Control signal for fan and actuators

W3: Collective fault message, only with 2-pipe units, non-floating, 24 V DC/max. 0.5A

The number of connecting wires required including fuses is given on the individual control units.

Electrical supply: observe the technical connection requirements laid down by the utility companies!

Stand-alone unit, KaControl

*) Lay shielded cable e.g. B. J-Y(ST)Y, 0.8 mm separately from power cables.

**) Lay shielded data cable, twisted pairs, e.g. UNITRONIC® BUS LD 2 x 2 x 0.22 mm² or similar, linear but separately from power lines.

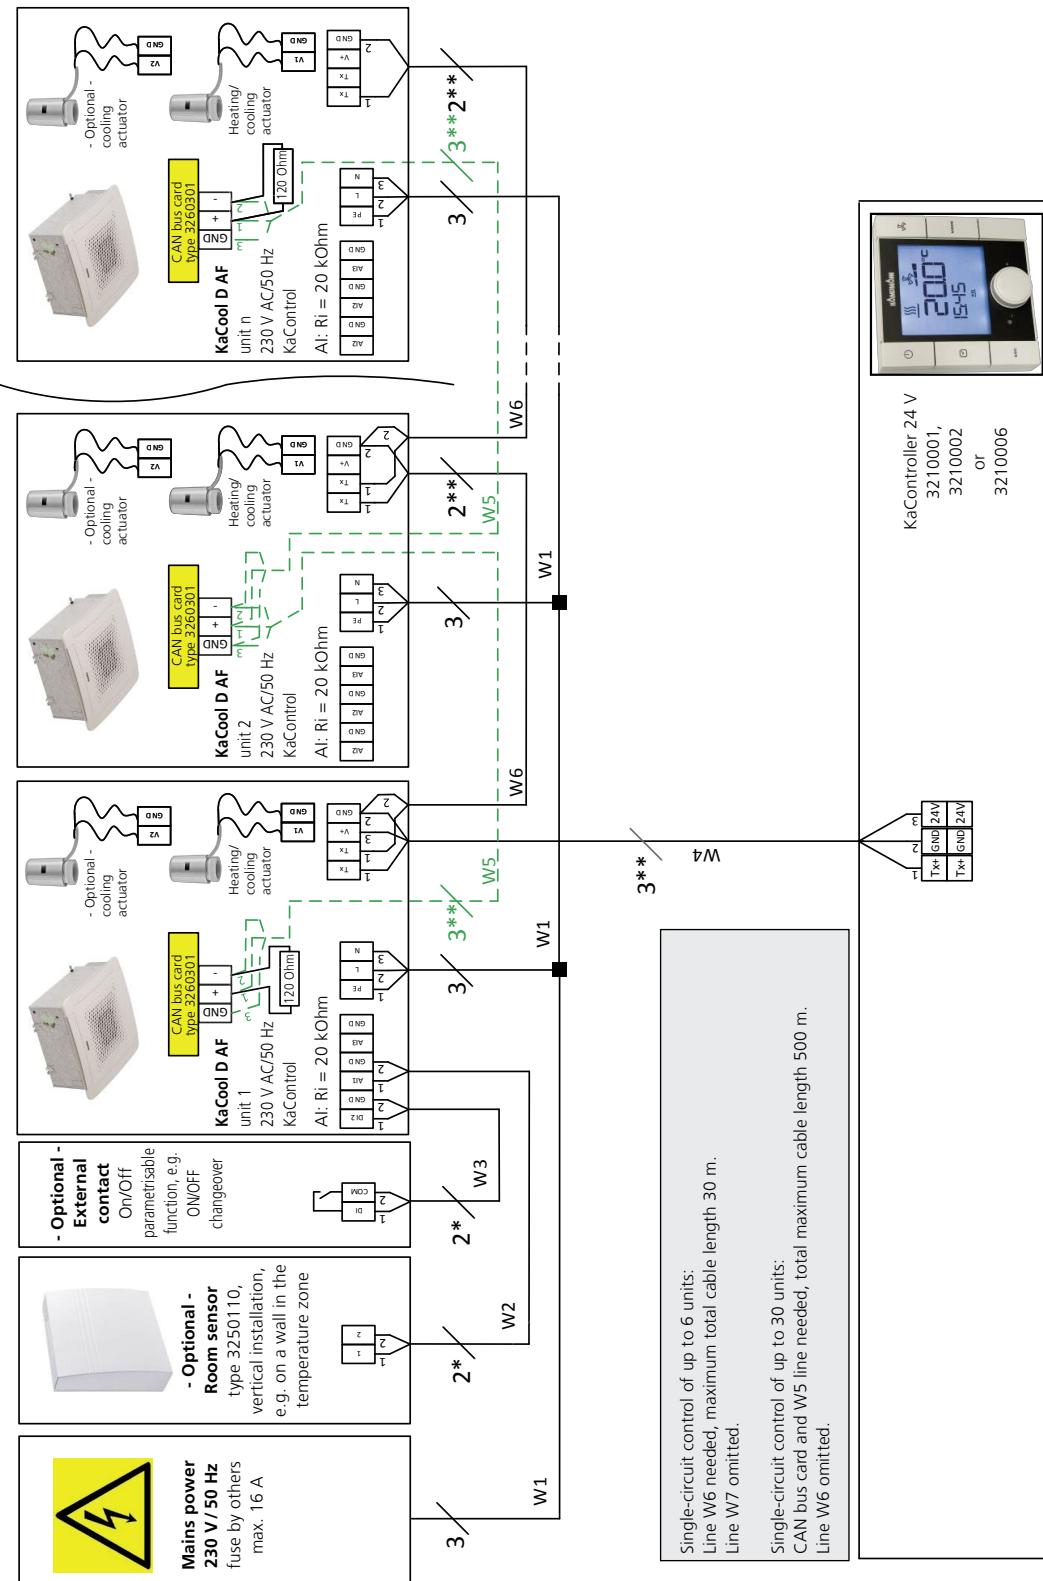

W1: Voltage supply

W2: Analogue input AI1 (optionally connectible), max. cable length 10 m, from 1 mm² 30 m, disconnect factory-fitted intake sensor.

W3: Digital input DI1 (optionally connectible), max. cable length 30 m, from 1 mm² 100 m

W4: Bus signal (tLan), max. cable length 30 m

W5: Analogue input A1 (optionally connectible), max. cable length 10 m, from 1 mm² 30 m

KaControl group formation max. 6 units or 30 units with CAN bus card

*) Lay shielded cable e.g. B. J-Y(St)Y, 0.8 mm separately from high-voltage cables.

**) Lay shielded data cable, twisted pairs, e.g. UNITRONIC® BUS LD 2 x 2 x 0.22 mm² or similar, linear but separately from power lines.

W1: Voltage supply

W2: Analogue input AI1 (optionally connectible), max. cable length 10 m, from 1 mm² 30 m, disconnect factory-fitted intake sensor

W3: Digital input DI1 (optional connection), max. cable length 30 m, from 1 mm² 100 m

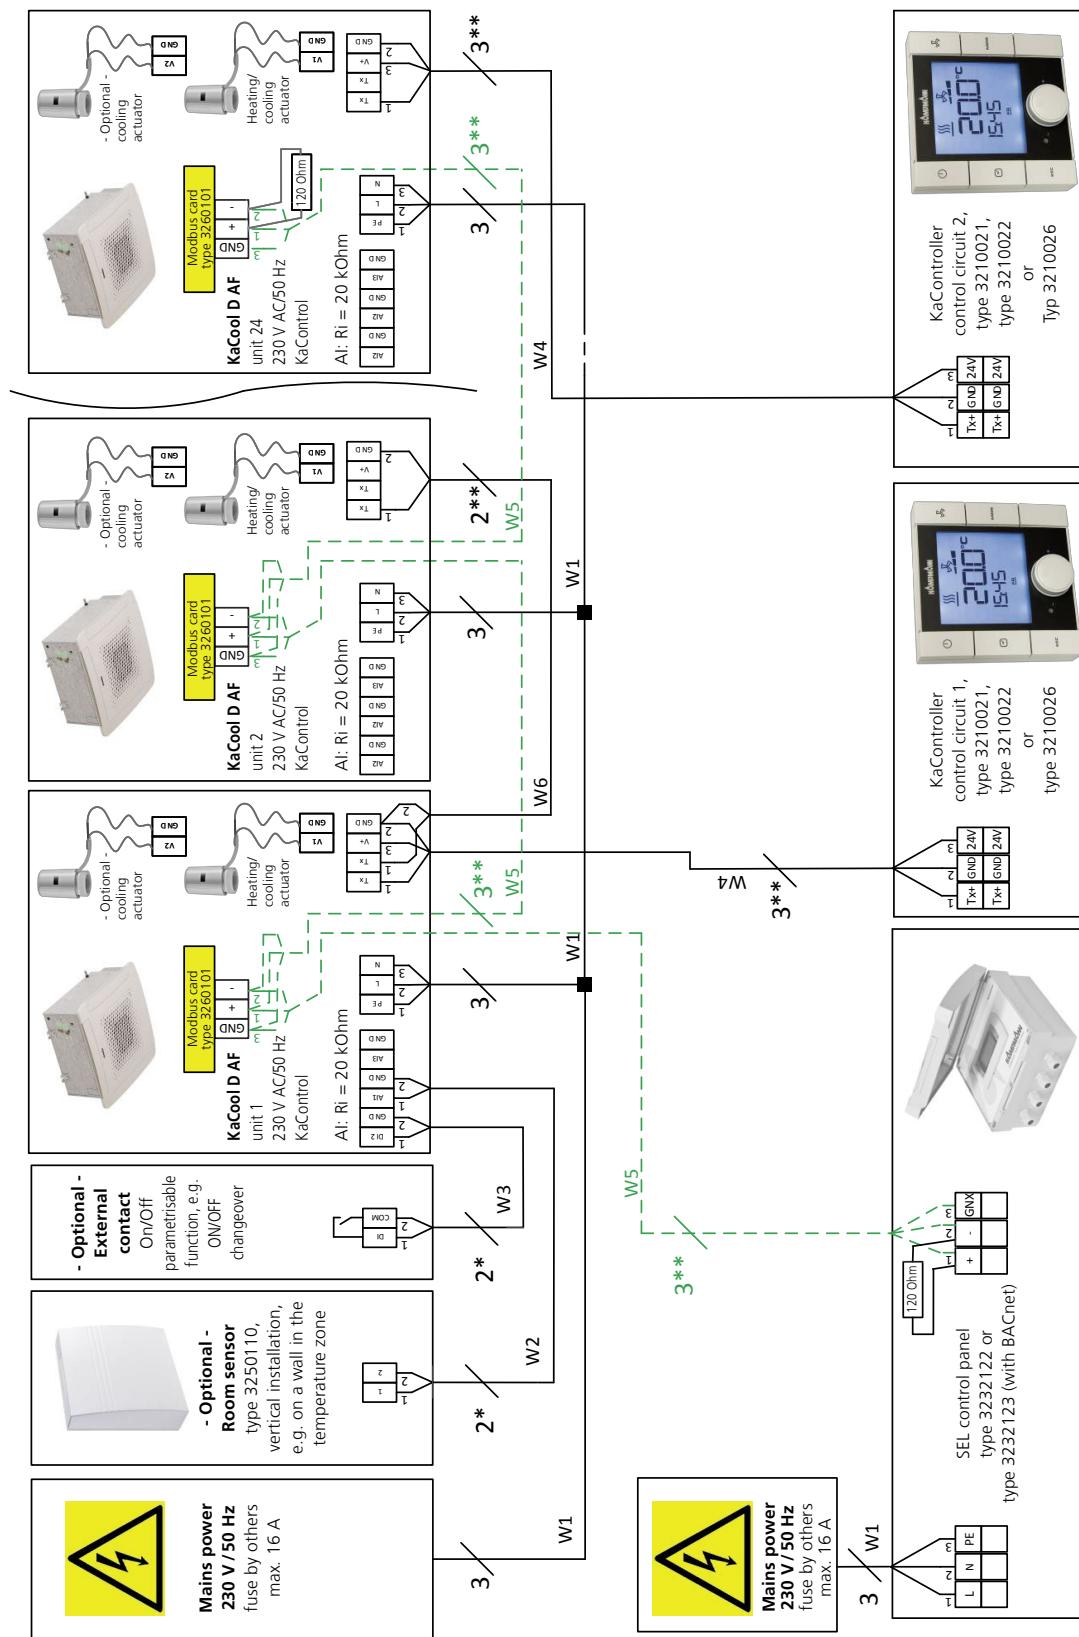

W4, W6: Bus signal (tLan), max. cable length in each case 30 m

W5: Bus signal (CAN bus)

Single-circuit control of up to 6 units.
Line W6 needed, maximum total cable length 30 m.
Line W7 omitted.

Single-circuit control of up to 30 units.
CAN bus card and W5 line needed, total maximum cable length 500 m.
Line W6 omitted

Electrical cabling – control via KaControl SEL control panel

*): Lay shielded cables e.g. B. J-Y(ST)Y, 0.8 mm separately from high-voltage cables.

**): Lay shielded data line in pairs e.g. UNITRONIC® BUS LD 2 x 2 x 0.22 mm² or similar, linear but separately from power lines.

W1: Voltage supply

W2: Analogue input AI1 (optionally connectible), max. cable length 10 m, from 1 mm² 30 m, disconnect factory-fitted intake sensor

W3: Digital input DI1 (optionally connectible), max. cable length 30 m, from 1 mm² 100 m

W4, W6: Bus signal (tLan), max. cable length in each case 30 m

W5: Bus signal (Modbus)

			KaCool D AF without KaControl, Models 6 – 7	325009042110
		Open / Close 2-pipe 24 V drive	KaCool D AF with KaControl, Models 0 – 1	325009012112
			KaCool D AF with KaControl, Models 2 – 4	325009022112
			KaCool D AF with KaControl, Model 5	325009032112
			KaCool D AF with KaControl, Models 6 – 7	325009042112
		Open / Close 4-pipe with 230 V drive	KaCool D AF without KaControl, Models 0 – 4	325009014110
			KaCool D AF without KaControl, Models 5 – 7	325009024110
Open / Close 4-pipe 24 V drive	KaCool D AF with KaControl, Models 0 – 4	325009014112		
	KaCool D AF with KaControl, Models 5 – 7	325009024112		
3-way valve kit				
	3-way valve kit	Open / Close 2-pipe wih 230 V drive	KaCool D AF without KaControl, Models 0 – 1	325009012120
			KaCool D AF without KaControl, Models 2 – 4	325009022120
			KaCool D AF without KaControl, Model 5	325009032120
			KaCool D AF without KaControl, Models 6 – 7	325009042120
		Open / Close 2-pipe 24 V drive	KaCool D AF with KaControl, Models 0 – 1	325009012122
			KaCool D AF with KaControl, Models 2 – 4	325009022122
			KaCool D AF with KaControl, Model 5	325009032122
			KaCool D AF with KaControl, Models 6 – 7	325009042122
		Open / Close 4-pipe with 230 V drive	KaCool D AF without KaControl, Models 0 – 4	325009014120
			KaCool D AF without KaControl, Models 5 – 7	325009024120
Open / Close 4-pipe 24 V drive	KaCool D AF with KaControl, Models 0 – 4	325009014122		
	KaCool D AF with KaControl, Models 5 – 7	325009024122

Accessories

Figure	Article	Properties	Suitable for	Art. no.
Connections				
	Primary air connection spigot	For the connection of external primary air.	KaCool D AF models 0-4	325009010300
			KaCool D AF models 5-8	325009020300
Control accessories, electro-mechanical				
	EC climate controller	<p>Heating/cooling climate controller 2- / 4-pipe systems. Operating modes AUTO / MAN / OFF. Fan speed can be set using 3-stage switch (parametrisable). Room frost protection function, internal temperature sensor, DIP switch for function selection. Plastic housing, pure white, similar to RAL 9010, surface-mounted Three inputs for: external flow sensor (47 kOhm) / heating/cooling changeover contact, external room temperature sensor (47 kOhm), ECO/Day or On/Off changeover Three outputs for: speed control (0-10 V DC/5 mA), fan actuators (230 VAC/5(1) A) Operating voltage: 230V AC / 50 Hz / <2 VA Protection class IP30 Dimensions W x H x D: 110 x 111 x 26 mm</p>	Ceiling cassettes with EC fan without KaControl, only in conjunction with valve kits with 230V actuator	196000030155
	EC climate controller with clock	<p>Climate controller for heating / cooling systems in 2-/4-pipe configurations with timer program. Summer/winter time changeover, mode switch (with room frost protection monitoring), manual 10-stage speed switch. Flush-mounted, pure white, similar to RAL 9010. Two inputs for: external dewpoint sensor, external flow sensor, external room temperature sensor, heating/cooling, ECO/Day or On/Off changeover Analogue output: 0-10 V/5 mA 2 switching contacts per 230 V/3 (0.5) A Control range: 5-30 °C heating and 18...40 °C cooling Power reserve: approx. 3 days Operating voltage: 230 V/50 Hz / <2.2 VA Protection class: IP 30 Dimensions W x H x D: 81 x 85 x 18 mm (installation height, +29 mm installation height, flush)</p>	Ceiling cassettes with EC fan without KaControl, only in conjunction with valve kits with 230V actuator	196000030256

Accessories

Figure	Article	Properties	Suitable for	Art. no.
KaControl accessories				
	KaController operating unit with one-touch operation	Room control unit, wall-mounted, in a high-quality design, plastic housing, colour similar to RAL 9010, large LCD multifunctional display, built-in room temperature sensor, communication interface to the Kampmann T-LAN bus system, automatically switching LED backlighting, press/turn navigator dial with endless turn/lock function, individually adjustable basic display, integrated day, night and week program, password-protected parameter level for C1 control option	All models	196003210001
	KaController operating unit with side operating keys	For quick access to fan settings, operating modes, Eco mode, time and timer program, otherwise as art. no. 196003210001	All models	196003210002
	KaController without function keys, black	Room control unit for wall mounting, high-quality design, plastic housing, Traffic black (similar to RAL 9017), otherwise as art. no. 196003210001	All KaControl secondary units	196003210006
	KaControl SEL panel without BACnet	KaControl electronics housed in a surface-mounted wall housing, wired ready-for-use, including KaControl operating unit for the central control of Kampmann products via a serial bus communication (Modbus); for integration of a maximum of 24 units (Modbus subscribers) (optionally with a maximum of 6 BACnet objects in a BACnet/IP network)	All models	196003232122
	KaControl SEL panel with BACnet	For wall mounting, IP30 surface-mounted, white RAL 9010, alternative to the temperature sensor in the KaController		196003232123
	KaControl room temperature sensor	All models	196003250110	
	Pipe clip-on sensor	For detecting the temperature of the medium, including strap, 3m cable, to protect the unit from frost	All models	196003250115

KaControl accessories				
	Serial CAN bus card	To increase the number of units in a single-circuit control system	All models	196003260101
	Serial Modbus card	For connection to Modbus networks	All models	196003260101
	Serial Konnex card	For integration into KNX/EIB networks	All models	196003260701
	Serial LON FTT10A card	For integration into a LON FTT10A network	All models	196003260501
